

Gloves with Dyneema® Diamond Technology:

superior cut resistance combined
with great comfort.

The main benefits of our gloves made with Dyneema® Diamond Technology are the improved comfort and the outstanding cut resistance. By avoiding the use of glass fiber, we eliminate the risk of itching when the fiber has been worn out.

This new and innovative technology allows us to create a fantastic product with better value, offering the wearer an improved glove for daily use.

We appreciate this partnership with DSM, because it enables us to create products that cover the demanding needs of different end users and it also contributes to the value and image of our distributors.

Gloves made with Dyneema® Diamond Technology offer superior cut resistance and comfort, and are based on the world's strongest fiber.
